

OneID® Platform Proves its Resilience

On 24 July, OneID® went live with major UK online services, marking a significant step in implementing age verification in line with the UK’s Online Safety Act (OSA).

This rollout wasn’t just another deployment. **It was a real-world test of its resilience, reliability, and, most importantly, how secure it makes the user feel.**

Over the last few days, since Ofcom’s mandatory age assurance enforcements came into effect, the OneID solution has been handling significant volumes. Seamlessly, securely and at speed.

Here’s what the numbers from 24-29 July look like.

Children stopped from accessing harmful content over the weekend.
