OneID® announces innovative partnership with eSign market leader Nitro

London, UK – October 24, 2023 – OneID® is delighted to announce a strategic partnership with Nitro Software, a globally renowned leader in eSignatures and document productivity solutions.

OneID® looks forward to repeating the success Nitro has with itsme® in Belgium, where they have the largest share of the eSigning market. Like itsme®, OneID® can be used by over 70% of the adult population – that's c50million adults in the UK. And like itsme®, there are no documents to scan and the user can verify their identity in just seconds.

About Nitro

Nitro is a global SaaS leader in PDF document management and eSigning. Nitro's Productivity Platform includes powerful PDF tools, digital workflow automation, highly secure eSigning and identity capabilities. Its analytics solution measures and quantifies ROI, usage and sustainability impact. With a best-in-class customer success team, Nitro supports more than 67% of the Fortune 500, 3 million licensed users and 13,000+ business customers across 157 countries.

A Synergy of Expertise

Nitro has consistently championed country-specific, best-of-breed identification and signing methods. This partnership integrates OneID® seamlessly into Nitro Software and promises to elevate the security and efficiency of the eSigning process across the UK. Nitro Sign Premium customers in the UK will enjoy the privilege of effortlessly incorporating OneID® into their workflows. Now, they can protect their electronic signatures with robust signer-identity verification, increase the evidentiary value of any digital signature they collect and significantly decrease their exposure to fraud.

Enhanced Trust and User Experience

Nitro Software and OneID® share a strong commitment to delivering innovative solutions that elevate digital security, efficiency and convenience. This partnership represents a significant milestone in the evolution of eSignatures in the UK, providing businesses and their customers with peace of mind and confidence in their electronic transactions.

The integration enables businesses to seamlessly incorporate OneID® into their eSigning process with Nitro.

The process is user-friendly and provides business users and their customers with a simple

way to eSign documents in real-time.

“What sets the integration of OneID® with Nitro apart is its uniqueness in the market. Nitro is the only solution that offers both identification in a KYC workflow and eSignatures with OneID®, alongside access to a wide array of other digital identity schemes, setting a new standard for high-trust transactions.” – says Filip Verreth, VP Product at Nitro

How does it work?

Nitro Software has integrated OneID® for identity verification and can easily be incorporated into an eSigning process by selecting it as the preferred method of verification for the signer.

To use OneID®, an individual chooses the service as their verification method when signing a document, or proving their identity, and consents to OneID® contacting and verifying their details with their bank (online or mobile banking). Once verified, the individual can then continue to complete the secure eSigning process in just a few seconds.

Embedding OneID® into the eSigning process assures businesses that the signer is present and their details have been verified by their bank.

Enabling businesses to increase conversion and maintain compliance

This collaboration merges the most advanced security measures with effortless efficiency. It empowers individuals to embrace electronic transactions confidently, ensuring their identities are protected and helping businesses increase conversion and maintain compliance.

“Together, Nitro Software and OneID® are at the forefront of shaping a secure digital future for both businesses and consumers within the United Kingdom.” - Concludes Paula Sussex, CEO at OneID®
